BRIEF TO THE ONTARIO
COMMITTEE ON TAXATION

ON BEHALF OF THE INDEPENDENT
SECONDARY SCHOOLS IN ONTARIO

BRIEF TO THE ONTARIO COMMITTEE ON TAXATION

ON BEHALF OF THE INDEPENDENT SECONDARY SCHOOLS IN ONTARIO

Purpose of this Brief

Under the existing legislation in Ontario, independent non-profit private schools do not receive direct financial assistance from government at any level. They have, however, been exempted from municipal property taxes subject to the limitations noted below. (1) This brief is to outline the contribution of these independent schools to the community at large, and to propose that the existing tax exemption be continued. It is our submission that the municipalities derive benefits from these schools that more than compensate for the loss of revenues arising from their exemption from property taxes. If the exemption on property taxes were to be removed and there were no compensating grants, the existence of many of the independent schools would be seriously threatened. We submit, furthermore, that any arguments favouring the removal of property tax exemption for independent non-profit schools have little validity and fail entirely to take into account the very real financial advantages that such schools afford to the province and the municipalities in which they are located. For these reasons, the present exemption should be maintained.

Extent of independent schools

This brief is submitted on behalf of an unrelated group of the 160 non-profit independent schools listed in Appendix A attached. These include non-denominational or Protestant church affiliated private schools, Roman Catholic private schools which are either wholly or at least in grades 11 to 13 unsupported by school taxes, and Jewish schools. Appendix A also shows the numbers of students enrolled in the schools listed. All these schools provide training at the

Note (1) Independent schools are exempted from municipal property taxes under a provision of The Assessment Act, Sec. 4, para. 6 which reads in part:

"The building and grounds not exceeding in the whole fifty acres of and attached to or otherwise bona fide used in connection with and for the purposes of a seminary of learning maintained for educational purposes, the whole profits from which are devoted or applied to such purposes, but such grounds and buildings are exempt only while actually used and occupied by such seminary, and such exemption does not extend to include any part of the land of such seminary that are used for farming or agricultural pursuits and are worked on shares with any other person, or if the annual or other crops, or any part thereof, from such lands are sold".

secondary school level and the cost of educating the students is not a public expense. The schools receive no public grants, nor is there any relief from school taxes for parents of the students. The total enrolment is approximately 29,500. Although the many independent elementary schools are not represented in this brief we believe that the facts which are presented also apply to them.

The independent secondary schools supplement the public supported school system. Most of the schools draw students almost exclusively from their own community, and if the schools did not exist, the municipalities would be required to provide facilities and bear the cost of educating these students. A few of the independent schools draw most of their students from outside the community, but most of these schools are in small centres and represent a valuable asset to these communities.

Role of the independent school

It is generally acknowledged that the independent schools in Ontario have and will continue to play an important role in the elementary and secondary education system. To varying degrees the independent schools attempt to offer a more closely supervised and more extensive program than is usually provided by the tax dependent schools. The schools themselves and the individual classes are as a rule smaller than is found in the tax supported schools, and there is more emphasis on participation in sports and cultural activities. In addition, the independent schools usually have religious associations and attempt to encourage an appreciation of spiritual and moral values. They do a particularly good job for students who need more specialized instruction, and in rounding out the interests and personalities of the unusual or gifted students. The residential schools are able to go even farther than these basic objectives by giving the students experience in responsibility, leadership, and the application of citizenship principles in their school community.

Some of these independent schools have been operating for many generations, and are the forerunners of the tax-supported school system. Some have been pioneers in new teaching techniques and all secondary education has benefited from their experiments.

It is not possible to evaluate all the benefits of independent schools in precise terms. They provide the community with a choice in its educational facilities and thus give meaning to the principle of freedom of choice which is a fundamental of our democratic society. In addition, the independent

schools graduate young people into the community at large with a different type of training. The resulting diversity among young people cannot but enhance the economic, social and cultural achievements of the community as a whole.

The success of the independent schools is a result of their basic freedom and very independence. They are free to choose their own methods of teaching, choose their own staff, and develop their own environment for the fulfilment of their ideals. This does not mean that they do not have to meet the educational standards set by the Province. All of the independent schools represented in this brief are subject to and welcome inspection by Department of Education officials, and prepare students for the standard matriculation examinations. In the lower grades they are free to choose their own curricula, but in the matriculation grades they largely conform with the public secondary school system.

All the schools listed are non-profit organizations, and most of them are working under strained financial circumstances. The schools must rely on outside private support to meet operating deficits and to provide capital facilities. The exemption from property taxes has been a most important factor in their budgeting, and its removal would seriously cripple the operation of many schools. There seems little doubt that the removal of the exemption would force some schools to close.

Financial contribution of the independent schools to the taxpayers

To discuss the value of the independent schools to the Province as a whole we suggest that it is useful to classify them in three categories.

- (a) Independent schools in large communities such as Toronto, Hamilton and Ottawa which are primarily for day students in the community. Examples are St. Michael's College, Upper Canada College, Havergal College, and the Jewish secondary schools.
- (b) Independent schools in smaller communities which cater almost exclusively to students in the community. These are typified by the many Roman Catholic private secondary schools.
- (c) Independent schools in smaller communities which accept "boarders" from outside the community as well as some local day pupils. Examples are St. Andrew's College, Ontario Ladies College and Lakefield Preparatory School.

In Appendix A we indicate that there are approximately 8,160 students attending the independent schools in the Metropolitan Toronto area. While some of the students come from outside the Toronto area, it should be realized that there is a compensating group of students from Toronto who are attending outside schools and who would otherwise be a responsibility of Toronto. If we assume conservatively that 90% of the students in Toronto's independent secondary schools would be in public supported schools if the independent schools did not exist, there is a financial contribution to the municipal rate payers of Metropolitan Toronto and the provincial government of approximately \$5,100,000. This is based on an annual cost of about \$694 per student for educating secondary collegiate students as reported by the Board of Education of Toronto for 1962.

A recent newspaper report stated that there are over 100 "portable" temporary classrooms in use in the Toronto school system. This indicates that the present school facilities are seriously inadequate, and that the independent schools do in fact relieve the pressure on the public supported system. If the independent schools did not exist, it would be necessary for the municipal school boards to build additional schools to replace them. The independent schools, for this reason, do not "duplicate" the public system; they supplement it and provide a choice of schools.

When the Hamilton, Ottawa, London and Windsor enrolment figures (7,941) are added to complete this first group, a further contribution of over \$4,685,000 is estimated based on the Ontario Department of Education reported annual cost per secondary school pupil for 1961 (\$593). (See Appendix B.) With the indicated trend of rising educational costs it is clear that the independent schools in these larger centres are now making a contribution to the taxpayers in excess of \$10,000,000 per year.

While some of the schools in large communities do accept "boarders" from outside the community, province, or the country, the number of these students is relatively small. Dominion Bureau of Statistics reports for 1960-61 indicate that less than 9% of the students in private schools in Ontario are from outside the Province of Ontario. These "boarders" do not affect in any way the educational costs of the local community. Their presence, however, is a real economic benefit to the community in that they pay substantial fees, shop in the locality, and attract outside visitors. This represents a sizeable amount of business coming into the community which would not otherwise be obtained.

University of Toronto

The second category noted earlier, the independent schools in smaller communities, present an equally strong case. These are the Roman Catholic and other secondary schools which almost exclusively serve students in the community. If they did not exist, the municipalities would be required to enlarge the present public supported school facilities. The schools represented in this category have over 12,000 students and make a contribution to the municipal and the provincial government of approximately \$7,100,000 if the Ontario average cost figure for 1961 is used.

While the schools in these first two categories may occupy valuable property from an assessment standpoint, they provide direct savings in educational costs to the municipalities and the Province of Ontario of over \$17,000,000. These savings are undoubtedly far in excess of any revenues that might be raised by property taxation.

The third group, independent schools in small centres which cater primarily to boarders from outside the community, do not significantly relieve the education cost of the local municipalities. However, most of their students are from Ontario and therefore reduce the education costs of the Province and other municipalities in Ontario. These schools have an enrolment of approximately 1,500 in the secondary grades. For the community they represent a stable and desirable type of enterprise that gives business to local merchants and service establishments. They are normally generous in loaning their facilities to the community, and often enhance its appearance. These are, admittedly, intangible or unmeasurable benefits but are nonetheless real.

Based on the experience in the United States and our knowledge of the few schools which are in this category in Ontario, it would be a rare community which would not resist the removal of any such enterprise even though it pays no local taxes. It has also been the U.S. experience that this type of school tends to upgrade the quality of the tax-supported schools in the vicinity by its example.

The case against institutional exemptions

In discussing the case against institutional exemptions, independent schools are usually grouped with other exempt institutions such as churches, hospitals, recreational centres, veterans' halls, and universities. It is argued that the full range of municipal services redounds to the benefit of these institutions, their clientele, and their property. Because institutions do not pay for these services, the burden of maintaining them is shifted to other segments of

the taxpaying community. The question has been raised whether the local governments receive a quid pro quo for the indirect subsidy which the tax exemption offers.

It is also contended that another disadvantage of the exemption is the unevenness of the distribution of institutional property. Since institutions almost always are found in urban areas, the city especially feels the impact of the exemptions, and the burden of this indirect subsidy falls upon the taxpayers of the urban area. It is often true that institutional service areas and city boundaries do not coincide. Thus one group may grant the tax exemption while another group benefits.

A further argument put forward is that the exemption to institutions can lead to a degree of stagnation in civic redevelopment. Land is improperly used because there is no pressure of taxes to make the owners relocate.

While these arguments may have some measure of general validity, they are particularly weak in the case of the independent schools. As previously noted, while by no means all the students in the schools represented in this brief attend secondary schools in their own municipality, a large majority of them do. This represents a direct saving in education costs many times exceeding the cost of any municipal services rendered - and the benefits accrue to the same taxpayers that pay the cost of these services. Since the general property taxes and the school taxes are both based on the assessed value of property, the benefits of reduced education expenses and the cost of services provided are allocated in exactly the same proportions.

The concentration of institutions in urban centres does not apply to the independent schools. The only evidence of unevenness of distribution in relation to population groupings is found in the independent boarding schools located in smaller centres. These schools draw most of their pupils from the cities and so tend to draw students away from the urban centres. There are some inequalities in major urban centres in which independent schools in some municipalities also serve the population in neighbouring areas, but in the present situation these are not serious. Most of these are in Toronto, and if the present investigations should result in a metropolitan amalgamation or some form of equalized taxation any anomalies would be eliminated.

In regard to the argument that tax free institutions may hamper civic redevelopment it is submitted that schools are normally located in residential areas and historically move when the nature of the neighbourhood

changes. Many of the independent schools grace the community and tend to increase the value of property in the adjoining neighbourhood.

Taxes offset by reimbursing grants

The suggestion that independent schools should be subject to property taxes or payments in lieu of taxes but should also be reimbursed for these specific payments by provincial grants is impractical in application. We know of no precedent of payments in lieu of taxes for property owned or operated by non-governmental organizations. Direct taxing or payments-in-lieu of taxes accompanied by reimbursing grants from the provincial government would open the door to disagreements between different levels of government about assessment values and the value of different types of independent schools. The independent schools could be caught in the ensuing cross-fire. Political discussions of the virtues of different religions and racial groups would be invited, and discriminatory types of legislation could ensue.

The independent schools are all under financial strain and would welcome provincial or federal grants provided there was no encroachment on their objectives. Such a plan has been introduced in Quebec but not at the expense of their municipal property tax exemption or their basic independence. The Quebec provincial government provides a subsidy to the independent schools of \$200 per student per year. In the United States some states provide free books or free transportation to students in independent schools, all of which are exempt from property taxes. In Australia, private school fees are allowed as a deduction in computing individual taxable income. These concessions are further attempts to recognize the relief to taxpayers which the independent schools make possible by taking on a significant segment of the education cost load.

Conclusion

We submit that the independent schools in Ontario are filling a public need by providing diversity in the educational field. While it is true that the municipalities are providing some services at no cost because of tax exemption, the independent schools are repaying the municipalities many times over in savings in education costs as well as benefiting the communities in other ways. The removal of the exemption would seriously damage or close off the operations of these schools. Removal of the exemption accompanied by reimbursing grants is impractical and wrong in principle. Furthermore, there is no significant body of

public opinion favouring the abolishment of this exemption.

We submit, therefore, that the public interest would be in no way served by abolishing the existing exemption from general property taxes for non-profit independent schools.
